CIRCULAR.

ORGANIZATION.

The Medical Department of the UNIVERSITY OF NASHVILLE was organized on the 11th of October, 1850, at a full meeting of the Board of Trustees, by the unanimous appointment of the present Faculty. By an arrangement made with the Trustees, the Faculty are secured in the exclusive management of the Department; a feature in its organization calculated to have the most beneficial effect upon the prosperity of the School.

EDIFICE.

The Trustees, at a subsequent meeting, gave to the Department a spacious building on College Hill together with ample grounds, for the term of twenty years, which they secured by lease. This is the East Wing of the Medical Department—fronting on Market street 76 feet, and towards the city $45\frac{1}{2}$ feet. It is three stories high, with an attic, affording ample accommodations for dissecting rooms, museum, library, laboratory, and professors rooms. To this a centre building is attached, containing two spacious lecture rooms, fifty feet square, capable each of seating five hundred students. The lower room is 19 feet high and will be occupied by the Professor of Chemistry, and temporarily by the Professors of Theory and Practice, and Materia Medica. The upper room is 23 feet high and octagonal in the arrangement of seats. In this the Professors of Anatomy, Surgery, Obstetrics and Physiology will lecture. The students enter the lecture rooms by two flights of stairs in a hall 14 by 50 feet, fronting College street.

CLINICAL INSTRUCTION.

The State Hospital.—The beautiful buildings erected in the city many years ago for a Lunatic Asylum, and for a long time employed as such, at the last meeting of the Legislature were converted into a State Hospital. The 5th section of the Act creating the Hospital, says, “the Professors and students of the Medical Department of the University of Nashville shall have free access to the Hospital under proper regulation for that purpose.” The institution it is hoped will by the next session of the College offer many advantages to the student.

St. John's Hospital.—This in charge of the Sisters of Charity, who have with a generosity worthy of all praise tendered its advantages free of charge to the students of the Medical College. In addition to these the Faculty have fitted up a suite of large rooms in the College buildings exclusively for patients, where the most interesting cases will be kept subject to the daily inspection of the student.—They have also established a DISPENSARY at the College for out door patients who will be examined before the students and prescribed for, and they will have an opportunity of watching the progress of the case from day to day until it is dismissed. Surgical operations will, as heretofore, be performed in the anatomical amphitheatre, before the students. No Surgical Clinic, it is confidently believed, in the United States is richer in the variety and gravity of its operation than this has been in the last two sessions or promises to be in the future. Notwithstanding the advantage of hospitals to Medical Schools was once thought indispensable, yet long experience has demonstrated that College Clinics are infinitely superior, and in consequence the two great Schools in Philadelphia have cut loose from them and rely upon the Clinics at their Colleges for clinical instruction. We shall follow their example so far as to spare no pains or expense in making our clinic all that can be desired, while free admission to both of our Hospitals is secured to the students.

OPENING OF THE COURSE.

The third course of Lectures will commence on Tuesday, the first of November next. The Anatomical rooms will be opened for Students on the first Monday of October, under the supervision of the Professor of Anatomy.

PRELIMINARY LECTURES.

A preliminary course of Lectures will be given, commencing on the first Monday in October. All the Professors will take part in this course, and will lecture on topics which WILL NOT BE FULLY DISCUSSED in the regular Session. This is equivalent to a prolongation of the term, while at the same time it does not impair the unity of the course to those Students who do not come in till November.

This arrangement is a virtual EXTENSION of the term to FIVE MONTHS.

REQUISITES FOR GRADUATION.

1. Three years regular study in the office of a regular physician.
2. Attendance upon two full courses of Lectures in a regular school of Medicine, the last of which must be in this Institution.
3. Four years reputable and regular practice will be accepted in lieu of one course of lectures, and such practitioner can become a candidate for graduation at the close of his first course.
4. The candidate for graduation must write a thesis on some medical topic and deposit it with the Dean by the first day of February.
5. The candidate must be twenty-one years of age, and of good moral character.
